

ABSTRACT

For manufacturing embroidered patch attached to the items like cap, dress, bag and others, the present invention provides reduction of processing time and amazingly improved productivity.

The embroidered patch and manufacturing method thereof according to the present invention has the feature that it consists of the embroidered portion wrapped with non-woven fabrics and a certain thickness of mid-hardened or soft non-woven fabrics like the shape that user aimed, and another embroidered portion sewn with embroidery yarn along the circumference line of said embroidered portion, and 1~2 mm thickness of soft materials may be added to said non-woven fabrics for thicker embroidered patch, and for the added soft materials, EVA(Ethylene Vinyl Acetate) is usually used, and the embroidered patch is directly manufactured by detaching the remained non-woven fabrics, which is not embroidered, and soft materials from the embroidered portion without cutting and zigzag sewing outline, which were needed for the current art.
